

Room control panel

GA01HB

APPLICATION

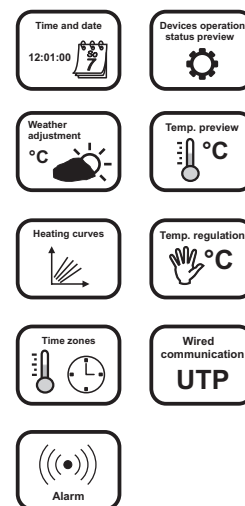

The GA01HB room control panel is a device which have been fitted for full communication with GECO heating controllers.

The GA01HB room control panel after connection with controller allows to control boiler operation comfortably from user's apartment. Room control panel enables not only preview of temperatures of heating cycles and preview operation devices status but also gives user opportunity of direct control.

The panel is offering a weather adjustment mode (based on heating curves). It enables to control boiler operation in mode of time zones.

PROPERTIES

- modern and functional visualisation of casing
- single-module construction enables comfortable installation in the user's apartment
- graphical display of the LCD type
- direct preview of devices operation status and temperatures of heating cycles
- capability to remote control cycles temperature from the user's apartment
- weather adjustment mode (heating curves and measurement of temperature outside) - available only in the case of co-operation with the controller equipped with an external temperature sensor
- time zones (control of heating cycle under diurnal and weekly)
- outside temperature preview (if co-controller equipped with an external temperature sensor)
- real-time clock indicating time and date on the panel display
- sound signal of the alarms
- wired communication with the controller - twisted pair cabling UTP
- many language versions
